Gaco WallFoam[™] SPRAY POLYURETHANE FOAM INSULATION

www.gaco.com | [800] 456-4226

The Gaco Five

FIVE REASONS TO SELECT **GACO WallFoam** SPRAY POLYURETHANE FOAM INSULATION

Unlike Fiberglass insulation, Gaco WallFoam completely seals air gaps and seams to create the highest level of insulation value.

1 SEAMLESS AIR BARRIER

Superior home insulation begins by keeping outside air out and inside air in. The more efficient the “Air Seal” the more efficient your insulation will be. Superior Air Seal begins and ends with **Gaco WallFoam**.

2 A HEALTHIER HOME

Gaco WallFoam eliminates the possibility of root causes of mold growth, pollutants, rodents, and pests from entering your home.

3 A STRONGER HOME

Gaco WallFoam is sprayed into the stud wall cavity tying the studs and the exterior sheathing together as one resulting in a stronger home.

4 SOLID INVESTMENT

Gaco WallFoam provides energy savings of up to 40% in all climates and seasons. In many cases the initial cost of **Gaco WallFoam** pays for itself within 5 years.

5 HIGH R-VALUE

High R-Value that provides a return on your investment through heating and cooling savings.

Gaco WallFoam[™]
SPRAY POLYURETHANE FOAM INSULATION

Gaco WallFoam Insulation:

THE ULTIMATE IN COMFORT, HEALTH, SAFETY AND ENERGY EFFICIENCY

Gaco WallFoam: “The Air Seal” Advantage

Superior home insulation begins by keeping outside air out and inside air in. The more efficient the “Air Seal” the more efficient your insulation will be. Superior Air Seal begins and ends with Gaco WallFoam. When traditional fiberglass insulation is placed in your wall cavity outside air easily flows through the gaps between the batts of insulation and your wall studs. The inability of fiberglass insulation to air seal cuts the effective R-value of your insulation to almost zero. Gaco WallFoam is sprayed into your wall cavity filling every nook and cranny, creating a uniform monolithic barrier. Outside air stays out and inside air stays in. That is the Gaco WallFoam Air Seal Advantage.

Gaco WallFoam: “The Healthier Home” Advantage

Your home is your castle. You want your castle to be safe, quiet and healthy. Gaco WallFoam eliminates the possibility of pollutants, rodents, and pests from entering your castle. More importantly Gaco WallFoam eliminates much of the root causes of mold growth. Mold can turn your castle into a shack. For mold to grow it needs oxygen, a food source and moisture. Moisture comes from warm air condensing on a cold surface. The superior “Air Seal” of Gaco WallFoam eliminates the airflow of hot to cold and the cold surface needed for condensation. Further Gaco WallFoam in third party testing, has been proven to be an inert non food source for mold. Gaco WallFoam eliminates two of the three necessary elements needed for mold, moisture and a food source. No mold, no outside pollutants, no pests no rodents, that is the Gaco WallFoam Healthier Home Advantage.

Gaco WallFoam: “The Investment” Advantage

An investment in Gaco WallFoam for your new home is as rock solid as a granite counter top. Although not as visible when you move into your new home, Gaco WallFoam is still working for you. Gaco WallFoam provides energy savings of up to 40% in all climates and seasons. Government studies have shown that an improper air seal allows your energy dollars to fly out any cracks, gaps or voids in your home's structure. Total year-round performance, through the ultimate air seal product on the market, is what gives Gaco WallFoam the Investment Advantage.

Gaco WallFoam: “The Stronger Home” Advantage

A stronger home is a safer home. The creation of a monolithic wall barrier rigidifies and strengthens the framing of a home. Gaco WallFoam is sprayed into the stud wall cavity tying the studs and the exterior sheathing together as one. This unified monolithic structure is the Gaco WallFoam Stronger Home Advantage.

Gaco WallFoam: “Synergy” Advantage

R-value is the traditional means for measuring the effectiveness of insulation. Gaco WallFoam has the highest insulation value, R 7 of any insulation material. Regardless of any other factor you are already well ahead. Add to that the Gaco WallFoam Air Seal advantage and the effective R-value of your home has just doubled. Instead of every inch of insulation creating an R 7, every inch of Gaco WallFoam has an “effective R-value” of 14.

Who can apply Gaco WallFoam?

Only a factory trained and certified applicator can apply the Gaco WallFoam system to your new home. Our certified applicators are trained in the operation of the proportioning unit used to spray apply the insulation, as well as the technique to provide the product to meet your local building codes.

What is “R” Value?

“R” Value is the resistance to heat transfer and is a measure of insulating efficiency. A material with a higher “R” Value will provide more insulation value per inch than one with a lower value.

What is air seal?

Air seal is the ability to stop air infiltration from the outdoors through gaps, holes and cracks in the wall structure. Gaco WallFoam is an excellent option to stop air leakage. It blocks all openings in the wall while conforming to, and sealing, all contours and penetrations. With Gaco WallFoam, house wraps can be eliminated.

Waterproofing and Insulating our World

ROOFING

Gaco Western Roof Systems: Innovative foam & coatings technology to waterproof any shape or substrate

Whether you're rehabbing an existing foam roof or coating a new metal roof, Gaco Western has a roof system to meet your needs. Gaco spray foam and coatings provide seamless insulation and waterproofing, and are fully adhered to the substrate. This eliminates common sources of leaks and pooling water beneath roofing material.

Gaco coatings are elastomeric, meaning they are able to stretch as the substrate warms and cools through the day and through the seasons. Characterized by high physical properties, GacoFlex coatings are tough enough to withstand years of abuse by sun and weather.

Gaco has also developed roof systems to meet specific project requirements. From quick-set spray applications, to highly reflective coatings designed to lower your energy bills, Gaco has the breadth and depth of applications to get your project done well and done on time.

DECKING

Gaco Western Auto and Pedestrian Decking Systems: Keeping the tread for tires and toes

Perhaps your next project is rehabbing a multi-level parking garage, or perhaps it's a new deck on a single-family home. In either case, Gaco Western has a decking system to meet your needs. Gaco auto and pedestrian deck systems are characterized by two key ingredients; tough elastomeric coatings, and GacoShell texture granules that won't scuff out.

GacoFlex coatings are color-stable, and are available in a variety of attractive colors. Gaco coatings are also elastomeric, meaning they are able to stretch as the substrate warms and cools through the day and through the seasons. Characterized by high physical properties, GacoFlex coatings are tough enough to withstand years of abuse by sun and weather.

GacoShell texture granules won't scuff out of the coating, eliminating the premature wear often caused by loose granule grinding into the coating surface. The GacoShell texture wears evenly with the coating, meaning the integrity of the waterproofing system is never compromised by granule popping out of the coating.

Gaco has developed decking systems to meet specific project requirements. From quick-set auto deck applications, to intricate pedestrian deck designs, Gaco Western can help you successfully tackle your next decking challenge.

INSULATION

Gaco Western Polyurethane Spray Foam: Insulating roofs and walls to lower energy costs

Polyurethane spray foam insulation can be used effectively in both commercial and residential settings. Whether you're retrofitting an old warehouse roof, or insulating a new home, Gaco sprayed polyurethane foam is the choice for seamless, effective insulation.

Commercial Roofing Applications – Gaco Western sprayed polyurethane foam can be used on both new roofs and retrofit projects. Sprayed foam is versatile, and can be used on roofs of all slopes and shapes to create a seamless insulating system. Foam roofing must be protected by an elastomeric coating suitable for that environment. The insulating properties of the foam, combined with highly reflective GacoFlex roof coating, reduce energy costs by keeping building interiors cooler in the summer and warmer in the winter.

Residential Insulation – Superior home insulation begins by keeping outside air out, and inside air in. The more efficient the "Air Seal," the less money you have to spend on heating and cooling costs. Gaco Wall Foam is sprayed into wall cavities, filling the nooks and crannies that ordinary fiberglass just can't reach. Gaco Wall Foam provides the ultimate in Air Seal technology, helping to keep your dollars in your pocketbook in summer and in winter.

WATERPROOFING

Gaco Western Below Grade and Between Slab Waterproofing: Sometimes you need the toughest waterproofing in hidden places

Below grade and between slab applications have one thing in common — once the job is completed, the waterproofing membrane is hidden from view. In such applications, it is critical that the waterproofing membrane be tough and durable enough to function without maintenance for many years.

Tried and tested for over 25 years, GacoFlex LM-60 liquid polyurethane coating has proven its reliability again and again in below grade and between slab applications. GacoFlex LM-60 is a 100% solids, zero VOC coating, meaning there is no smell to disrupt the work of other trades during the application process.

GacoFlex LM-60 is formulated for both vertical and horizontal applications, and will cling to vertical surfaces without runoff at the normal application rate of 4 gallons per 100 square feet. By creating a watertight barrier for structures of curving and sloping shapes, LM-60 provides the architect, designer or contractor with a versatility of application that is limited only by the scope of their imagination.

COATINGS

Other Gaco Western Systems: Whatever your next project, Gaco has you covered

There's so much that Gaco can do. GacoFlex elastomeric coatings and polyurethane foam can mold to almost any shape or structure, making challenging projects easier and solutions more effective.

From chiller tanks to controlled atmosphere rooms, reservoirs to mechanical room floors, even exterior wall coatings — Gaco Western has you covered.
